Practical - 3

AIM

Create, initialize and display simple variables and simple strings and use simple formatting for variables.

CODE & OUTPUT

In [1]:
```python
# a simple string
str1 = "Machine Learning is fun."
```

In [2]:
```python
print(str1)
```

Machine Learning is fun.

In [3]:
```python
# a simple variable
a = 5
print(a)
```

5

In [4]:
```python
# another simple string
str2 = "This is another string"
```

In [5]:
```python
print(str2)
```

This is another string

In [6]:
```python
# some more variables
b = 56
c = 45
d = 23
print(b)
print(c)
print(d)
```

56
45
23
